

DO YOU HAVE 20/20 VISION?

That doesn't mean
you have perfect eye health.

You may have underlying conditions
that your Optometrist can see.

Cataracts

Eyes become cloudy but could
still maintain 20/20 vision.

Glaucoma

Peripheral vision is affected first
but 20/20 vision is still possible.

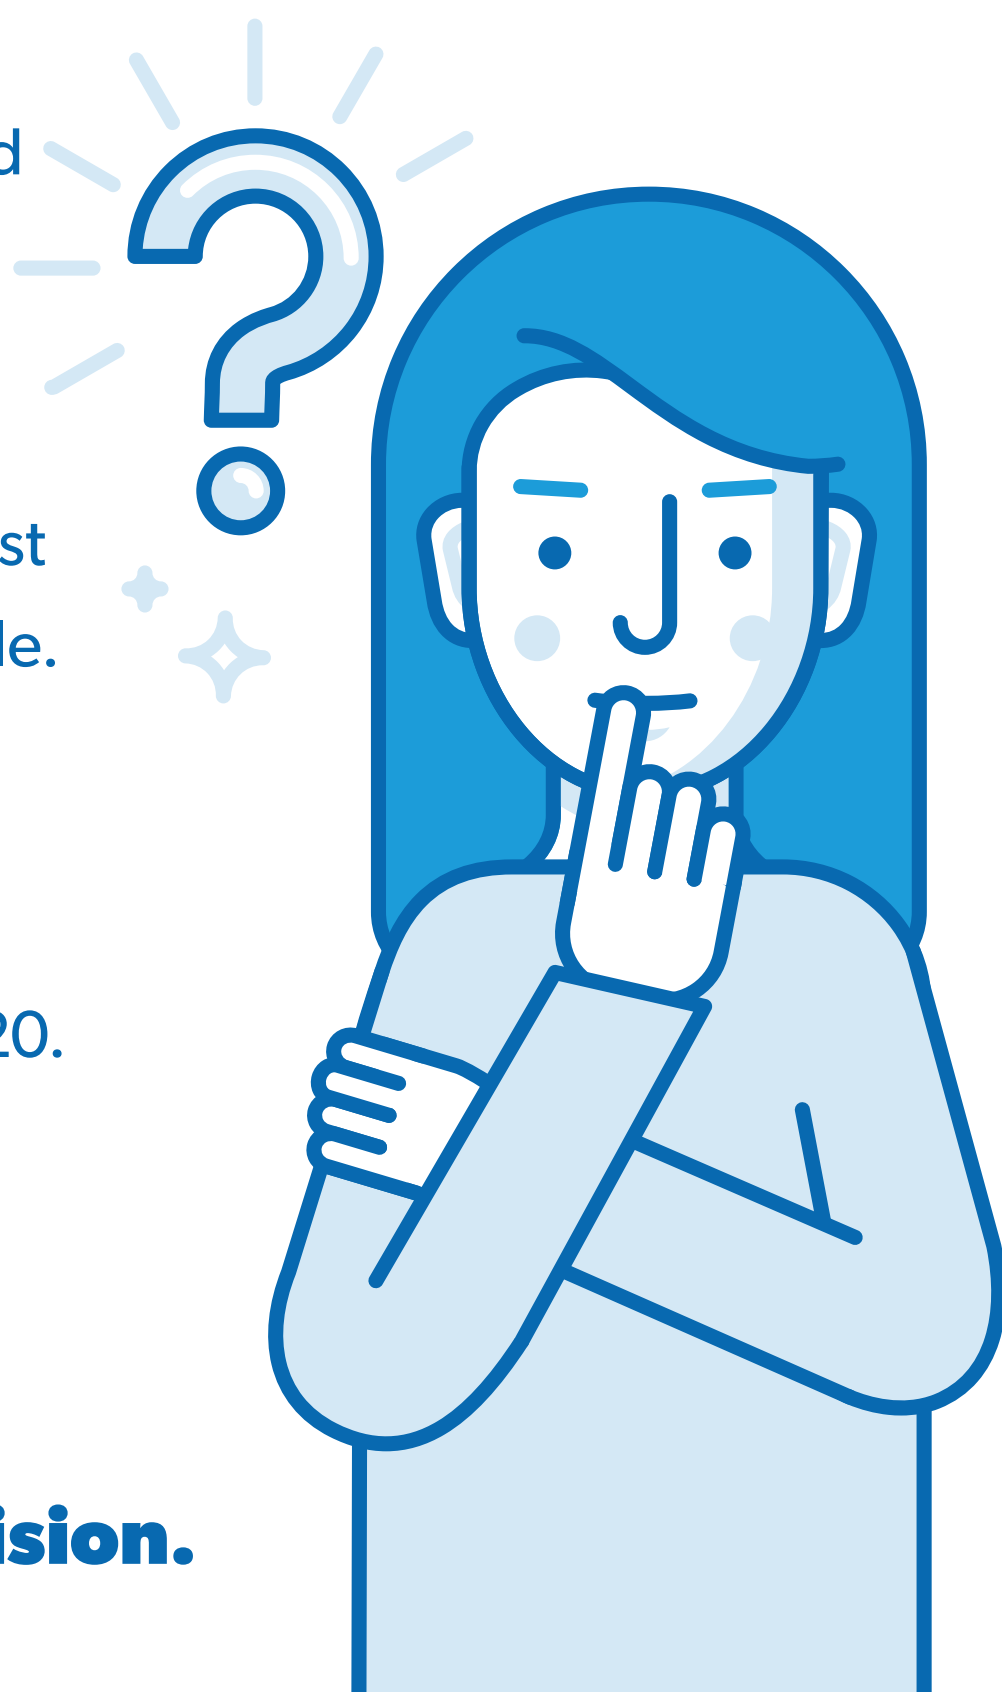

Diabetic Retinopathy

You may have more spots and
floaters and still maintain 20/20.

Book an appointment with
your optometrist today.

2020: Your sight is our vision.
